

Oracle + Procore: connected for construction

From projects to payables, Inoapps delivers the integrations that keep your construction business moving

Inoapps has been working with the engineering and construction sector since our earliest days. Our integration strategies connect Oracle Cloud Applications with industry-leading platforms like Procore—so your data flows, your processes align, and your projects stay on track.

For construction businesses, integration isn't optional, it's essential. Oracle Enterprise Resource Planning (ERP) delivers powerful capabilities, but these need to work seamlessly with the tools your teams rely on every day. The breadth of the Procore solution across the entire project lifecycle means that these integrations are numerous, complex and pervasive.

Broad experience. Deep expertise. Proven results.

Our Procore and Oracle Cloud Applications integration experience goes far beyond technical connections. Our customers expect each part of the process to be handled by the correct resources in each system, without the administrative overhead of managing everything centrally. They need to ensure the right person does the right thing in the right system.

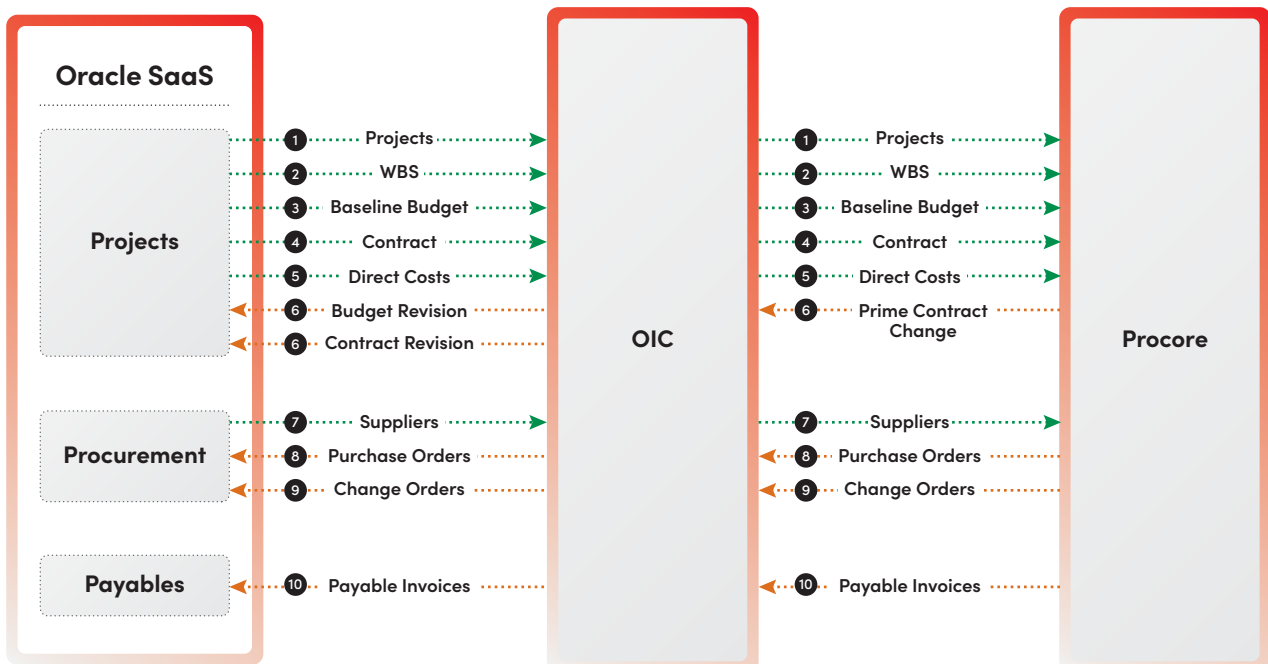

From projects and budgets to contracts, purchase orders, and change orders, we make sure critical data flows seamlessly.

Integration beyond the basics

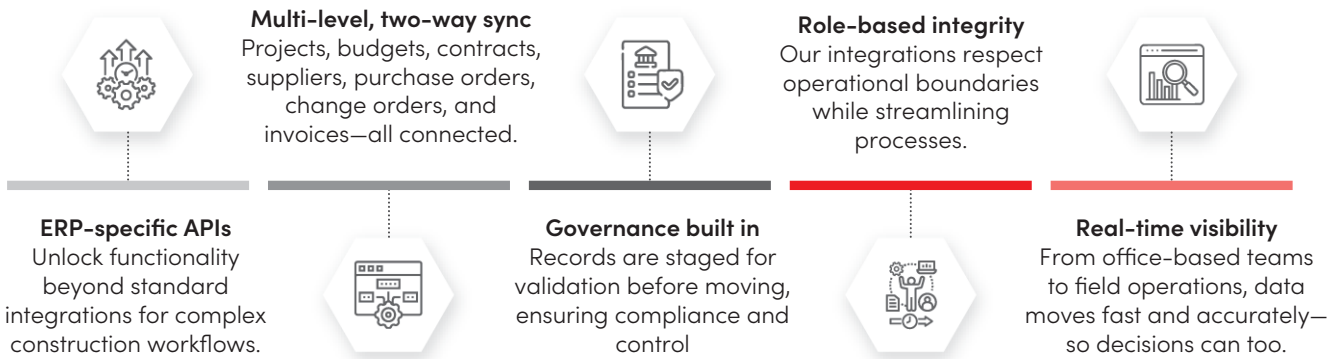

Procore offers a rich library of published APIs, but they don't cover the entirety of the entry points into the application. Construction workflows span office tasks, field roles, and governance matters. For scenarios where accuracy and accountability are critical, deeper integrations are essential.

That's why we worked closely with Procore development to enable ERP-specific functionality. We even secured C-level approval from Procore to use unpublished APIs—giving our customers access to advanced integration capabilities that aren't available in the standard API explorer.

Procore: not your standard integrations

What sets our approach apart

Introducing the Inoapps Procore Accelerator

Demand for Procore integrations is growing fast—so we've packaged our most requested flows into an out-of-the-box accelerator that gets customers live faster, with less complexity and lower effort.

Your data. Your processes. Seamlessly integrated.

Whether you're working with industry-standard tools or bespoke systems, Inoapps ensures your Oracle Cloud Applications are fully integrated and future-ready. Your data and processes are in safe hands.

"The Procore-Oracle integration that Inoapps delivered enabled our business to transition to a new ERP system without disruption to many large-scale construction projects. The continuity of change management and supply chain activities was critical for our company's success and this customized solution provided just that."
